

ABC Technologies

Technical Manual

Version 5.0 | June 2026

1. Introduction

This Technical Manual provides comprehensive guidance for system administrators, IT professionals, and power users responsible for deploying, configuring, and maintaining ABCCloud Suite. This document covers desktop agent installation, network requirements, troubleshooting procedures, and best practices.

NOTE: ABCCloud Suite is a cloud-native application. Most functionality is accessed via a web browser; no local installation is required for standard users.

2. System Requirements

Minimum and recommended hardware/software requirements for the ABCCloud Suite desktop companion agent (used for offline sync and file integration):

Component	Minimum	Recommended
Processor	Dual-core 2.0 GHz	Quad-core 3.0 GHz or faster
RAM	4 GB	8 GB or more
Disk Space	2 GB free	10 GB free (for local cache)
Display	1280 x 768	1920 x 1080 or higher
Network	Broadband 5 Mbps	10 Mbps or faster (50 Mbps for large file sync)
Browser	See Section 3	Google Chrome (latest)

3. Supported Operating Systems

Platform	Versions Supported	Notes
Windows	10 (22H2+), 11	Desktop agent fully supported
macOS	12 Monterey – 15	Desktop agent fully supported
Linux	Ubuntu 20.04+, RHEL 8+, Debian 11+	Desktop agent supported; UI via browser only
iOS	16.0 and above	Mobile app available on App Store
Android	10.0 and above	Mobile app available on Google Play
Web Browser	Chrome 115+, Firefox 118+, Edge 115+, Safari 16+	No plugin required

WARNING: Internet Explorer is not supported.

4. Installation Guide

4.1 Web Application (No Installation Required)

Navigate to <https://app.abctechnologies.com> in a supported browser. No installation is required for web access. Bookmark the URL for convenience.

4.2 Desktop Companion Agent

1. Download the installer from <https://app.abctechnologies.com/downloads>
2. Run ABCCloudSetup.exe (Windows) or ABCCloud.dmg (macOS) as an administrator.
3. Accept the End-User Licence Agreement (EULA).
4. Choose an installation directory (default recommended).
5. Click Install. The process takes 2–5 minutes.
6. Launch ABCCloud Agent from the Start Menu or Applications folder.
7. Sign in with your ABCCloud Suite credentials.

4.3 Silent/Enterprise Deployment

For enterprise mass deployment using Group Policy or MDM (Intune, Jamf):

- Windows MSI: `ABCCloudAgent.msi /quiet /norestart INSTALLDIR="C:\ABCCloud"`
- macOS PKG: `sudo installer -pkg ABCCloudAgent.pkg -target /`
- Configuration file: place `abccloud.conf` in the system-wide config directory.

5. First-Time Setup

1. Log in with the Admin email and temporary password from your welcome email.
2. Change your password immediately (minimum 12 characters, mixed case, number, symbol).
3. Enable Two-Factor Authentication (2FA) from Settings > Security.
4. Configure your organisation name, logo, and time zone under Settings > Organisation.
5. Invite team members via Settings > Users > Invite.
6. Configure billing details under Settings > Billing.
7. Run the Setup Wizard to import existing data or connect integrations.

6. Login Problems

6.1 Cannot Access the Login Page

- Verify your internet connection and try <https://app.abctechnologies.com> in another browser.
- Check <https://status.abctechnologies.com> for ongoing incidents.
- Disable browser extensions (particularly ad blockers) and retry.

6.2 'Invalid Credentials' Error

- Confirm you are entering the email address registered with ABC Technologies.
- Ensure Caps Lock is off. Passwords are case-sensitive.
- Reset your password via the 'Forgot Password' link if necessary (see Section 7).

6.3 Account Locked

After 10 consecutive failed login attempts, the account is locked for 30 minutes. Contact support@abctechnologies.com to unlock immediately.

NOTE: Administrators can unlock user accounts from Settings > Users > [Username] > Unlock Account.

7. Password Issues

7.1 Password Reset (Self-Service)

1. Click 'Forgot Password' on the login page.
2. Enter your registered email address and click Send Reset Link.
3. Check your inbox (and spam folder) for an email from noreply@abctechnologies.com.
4. Click the link within 60 minutes; after that, it expires.
5. Enter and confirm a new password meeting complexity requirements.

7.2 Password Complexity Requirements

- Minimum 12 characters
- At least one uppercase letter (A–Z)
- At least one lowercase letter (a–z)
- At least one digit (0–9)
- At least one special character (!@#\$%^&*())
- Cannot match any of the last 5 passwords

8. Configuration Guide

8.1 Email Notifications

Navigate to Settings > Notifications to configure email frequency (real-time, daily digest, or weekly). Notification templates can be customised on Enterprise plans.

8.2 Integrations

ABCCloud Suite integrates natively with:

- Google Workspace (Calendar, Drive, Gmail)
- Microsoft 365 (Outlook, Teams, OneDrive)
- Slack and Microsoft Teams (messaging)
- QuickBooks and Xero (accounting)
- Zapier and Make (automation bridges)

To connect an integration: Settings > Integrations > [Provider] > Connect.

8.3 Single Sign-On (SSO)

SSO via SAML 2.0 is available on the Enterprise plan. Navigate to Settings > Security > SSO and enter your Identity Provider (IdP) metadata URL.

9. File Upload Problems

9.1 Supported File Types

- Documents: PDF, DOCX, XLSX, PPTX, TXT, CSV, ODT
- Images: JPEG, PNG, GIF, WEBP, SVG, TIFF
- Archives: ZIP, TAR.GZ (auto-extracted; max 500 files per archive)
- Maximum single file size: 250 MB (Enterprise: 2 GB)

9.2 Common Upload Errors

- **ERR_FILE_TOO_LARGE:** File exceeds the plan's per-file limit. Compress or split the file.
- **ERR_UNSUPPORTED_TYPE:** File extension is not permitted. Convert to a supported format.
- **ERR_STORAGE_FULL:** Organisation storage quota reached. Delete files or upgrade storage.
- **ERR_UPLOAD_TIMEOUT:** Connection lost mid-upload. Retry on a stable connection.

10. Application Crash Troubleshooting

10.1 Web Application Crash (Browser)

1. Clear browser cache and cookies: Ctrl+Shift+Delete (Windows) or Cmd+Shift+Delete (Mac).
2. Disable browser extensions one at a time to identify conflicts.
3. Try in Incognito / Private mode.
4. Update the browser to the latest version.
5. If the issue persists in all browsers, report it via the support portal.

10.2 Desktop Agent Crash

1. Locate the crash log at: Windows: %APPDATA%\ABCCloud\Logs\crash.log | Mac: ~/Library/Logs/ABCCloud/crash.log
2. Restart the agent and reproduce the issue.
3. Submit the crash log via support portal ticket for analysis.

11. Performance Optimization

- Use Google Chrome for the best rendering performance.
- Enable hardware acceleration in your browser settings.
- For large data sets, use the built-in Export to CSV for bulk analysis rather than loading in the UI.
- Limit open browser tabs running ABCCloud to avoid memory contention.
- Desktop agent: reduce local cache size under Settings > Sync > Cache Limit.

NOTE: The ABCCloud dashboard refreshes every 60 seconds by default. Reduce polling frequency under Settings > Advanced if on a slow connection.

12. Network Requirements

Service	Protocol	Port(s)	Direction
Web Application	HTTPS	443	Outbound
Desktop Agent Sync	HTTPS	443	Outbound
Real-Time (WebSocket)	WSS	443	Outbound
Email Notifications	SMTP	587 (TLS)	Outbound (server-side)
API	HTTPS	443	Outbound

13. Firewall Configuration

Allow outbound HTTPS (port 443) to the following domains:

- *.abctechnologies.com
- *.abccloud.io (CDN assets)
- *.abccloudstatic.net (static resources)
- api.abctechnologies.com (REST API)
- push.abctechnologies.com (real-time notifications)

WARNING: Wildcard DNS rules (*.abctechnologies.com) are the recommended approach. Blocking subdomains selectively may cause unexpected feature failures.

14. Proxy Configuration

If your network routes traffic through an HTTP/HTTPS proxy:

1. Open ABCCloud Agent settings > Network.
2. Enable 'Use Proxy' and enter the proxy address and port.
3. If authentication is required, enter proxy credentials.
4. Click Save and restart the agent.

Alternatively, set the HTTPS_PROXY environment variable before launching the agent. PAC files are supported on Windows via the system proxy settings.

15. Database Connectivity

ABCCloud Suite manages its own cloud database. Customers on the Enterprise plan may configure a data warehouse connection for analytics:

- Supported: Google BigQuery, Snowflake, Amazon Redshift, Azure Synapse
- Connection: Settings > Integrations > Data Warehouse > Configure
- Data is exported in near-real-time via an encrypted change-data-capture pipeline.

NOTE: Direct database access (e.g., MySQL/PostgreSQL) to ABC Technologies' internal infrastructure is not provided.

16. Common Error Messages

Error Code	Message	Cause	Resolution
E1001	Session expired	Inactivity timeout (30 min)	Log in again
E1002	Permission denied	User lacks required role	Admin to update user role
E1003	Service unavailable	Planned / unplanned maintenance	Check status page
E2001	Upload failed	File too large or wrong type	See Section 9
E2002	Storage limit reached	Quota exhausted	Delete files or upgrade
E3001	API rate limit exceeded	Too many requests	Reduce call frequency
E3002	Invalid API key	Key revoked or wrong	Regenerate in Settings
E4001	SSO configuration error	IdP metadata mismatch	Re-import IdP metadata
E5001	2FA code invalid	Code expired or wrong	Regenerate code in auth app
E9999	Unknown error	Unexpected server error	Contact support with session ID

17. Troubleshooting Flowcharts (Text Format)

17.1 Cannot Log In

START > Is the status page showing an outage?

- YES > Wait for resolution, monitor status.abctechnologies.com
- NO > Is the error 'Invalid Credentials'?
- YES > Reset password (Section 7.1)
- NO > Is the account locked?
- YES > Wait 30 min or contact support
- NO > Is 2FA code failing?
- YES > Re-sync auth app clock; use backup code
- NO > Contact support with error code and session ID > END

17.2 File Upload Failing

START > Is storage quota exceeded?

- YES > Delete files or upgrade storage
- NO > Is file larger than 250 MB (or 2 GB on Enterprise)?
- YES > Compress or split file
- NO > Is file type unsupported?
- YES > Convert to a supported format (see Section 9.1)
- NO > Try uploading via a different browser > If still failing, contact support > END

18. Frequently Encountered Issues

Dashboard loads but shows no data

Verify your user role has at least 'Viewer' access to relevant modules. Check if a date filter is applied that excludes all records.

Email notifications not being received

Check your spam/junk folder. Whitelist noreply@abctechnologies.com. Verify notification settings under Settings > Notifications.

Integration sync is delayed

Integrations sync every 15 minutes by default. Force a manual sync from Settings > Integrations > [Provider] > Sync Now.

Reports export produces blank PDF

Ensure the date range contains data. Try exporting as CSV first to verify. If the issue persists, clear browser cache and retry.

19. Best Practices

- Enable 2FA for all user accounts, especially administrators.
- Review user access roles quarterly and remove access for departed employees immediately.
- Schedule regular data exports as a backup strategy.
- Monitor the ABC Technologies status page and subscribe to incident notifications.
- Use separate API keys for different integrations to isolate and revoke access easily.
- Keep the desktop agent updated to the latest version for security patches.

20. Contacting Technical Support

Before contacting support, gather the following information:

- Your account email address and organisation name.
- The error message and error code (if any).
- Steps to reproduce the issue.
- Browser name and version, or desktop agent version.
- Screenshots or screen recordings if possible.

Contact channels:

- Support portal: <https://support.abctechnologies.com> (all plans)
- Email: support@abctechnologies.com (Professional and Enterprise)
- Live chat: Available in-app bottom-right corner (Professional and Enterprise)
- Phone: +1-800-222-4567 option 2 (Enterprise 24/7)
